

Tailored solutions with Compass Broadband

At Compass Communications, we don't just offer one broadband solution and expect it to deliver. We'll assess your business requirements and tailor a solution for you, using the access method that best fits your needs.

If you feel you are not getting good broadband service right now, call us and we'll assess your current service provider against all the options. It makes perfect sense.

The right broadband answer

Compass Wireless

High speed broadband offered in areas unreachable by other access methods.

UNS

Carrier grade high speed offering with committed bandwidth throughout New Zealand.

Fibre

Reliable and robust broadband with speed options tailored to your needs.

ADSL or UBS

'Always on' connection as fast as your connection to the phone exchange allows.

Frame Relay

A cost effective fast and reliable connection for demanding network applications.

For more information call one of us today on 0800 640 840.

Choose from our broadband menu

You may not be aware of just how many choices you have given your location or your unique requirements. Our philosophy is to provide you the best possible broadband solution utilising our own carrier grade wireless and fibre networks, or alternatively drawing from our wide range of 'best in class' wholesale network providers.

You select the speed and the data allowance you need; we'll do the homework on which broadband delivery method is best for you.

Compass Wireless

Our wireless network delivers high speed in both directions, making it ideal for both surfing the net and delivering content to customers and business partners.

Compass Wireless delivers a superior user experience with some of the lowest contention ratios in the industry. Service is not affected by factors such as the distance of your premises from the local exchange, network overloading or rain. When response time is critical, for example when using real-time applications such as Voice over IP (VoIP), the exceptionally low latency* of wireless makes all the difference.

Note that Compass Wireless is also available in areas unreachable by other broadband access methods. To get Compass Wireless, your building roof must have a direct line of sight to the nearest Compass Communications wireless base station. To identify whether your business is able to get Compass Wireless, please refer to the Compass Line of Sight Guide, available from our customer care team or your account manager.

If your business falls outside our current wireless coverage areas, please register your interest with us, as we are constantly expanding our network.

Kordia™ Extend

Compass utilises the Kordia Extend product, which offers low latency wireless services to rural locations nationwide. As a low latency, high performance service, Extend is suitable for VoIP or broadband. Like Compass Wireless, Extend requires line of sight to your premises from transmission sites.

Please contact Compass to check if your premises have line of sight.

UNS

UNS is a symmetrical carrier-grade high speed DSL service offering committed bandwidth, high speeds and lower latency and jitter** than most ADSL services in New Zealand. UNS is available in many locations throughout the country via the Telecom network.

* Latency refers to the delay in transmission of data

** Refers to the variation in latency

Fibre

Fibre is the ultimate choice for extremely reliable and very high speed broadband service. With customisable speed options and dedicated bandwidth we can provide a reliable and robust connection that is tailored to your business needs.

We can deliver fibre connections in Pukekohe and Papakura through the Compass Fibre network and areas serviced by TelstraClear, Vector and CityLink throughout the rest of the country.

Unbundled Bit Stream (UBS)

Broadband access is delivered over Telecom lines and delivers downstream and upstream speeds as fast as your connection to the phone exchange will permit. This access method is suitable for a wide range of broadband uses. It delivers an 'always on' connection that leaves your line free to make and receive phone calls.

Actual speeds delivered may be affected however by factors such as distance from the exchange and the number of subscribers on your local Telecom ADSL network.

ADSL (TelstraClear)

ADSL is delivered over TelstraClear lines and is available in areas covered by the TelstraClear network. Delivering high speeds and lower latency and jitter than is commonly found in other ADSL (UBS) services, ADSL is suitable for a broad range of applications.

Frame Relay

Frame Relay provides a fast, reliable and flexible dedicated connectivity at a cost-effective price. Delivered through both the Telecom and TelstraClear networks, this is a high-performance, low latency solution that is ideal for demanding network applications.

Who is Compass Communications?

Compass Communications is an independent provider of calling and data services to thousands of business and residential customers across New Zealand. Compass has delivered innovative and technically advanced solutions to an expanding client base since 1995. Today the company employs more than 170 people and operates a multi-million dollar wireless and terrestrial network spanning thousands of kilometres across the country.
